

OP10 Multiple Media Picker is a great extension to the Umbraco Media Picker

This is the datatype view. Here you can configure which properties the user can edit in the dialog (Select properties) and in the quick-view (Select quick-view properties)

OP10.MultipleMediaPicker

Pick multiple items

☒

Start node

+ Add

Select Properties

Select properties that can be edited in the dialog

☒ Name (defaultNodeName)

☒ Physical name (physicalName)

☒ Image description (imageDescription)

Select quick-view Properties

Select properties that can be edited directly in the overview

☐ Name (defaultNodeName)

☐ Physical name (physicalName)

☒ Image description (imageDescription)

Save

This is the default view. Here you can see the “Image description” can be edited. This is because “Image description” was the property selected for the quick-view in the datatype view.

OP10 Multiple Media
Picker

This is a koala picture

Image description
Hanging around with penguins

Image description
Such nice flowers

If you hover over the image, then the image name appears in the top left. You can see this demonstrated here for the koala picture.

OP10 Multiple Media
Picker

This is a koala picture

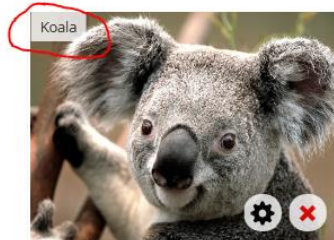

Image description
Hanging around with penguins

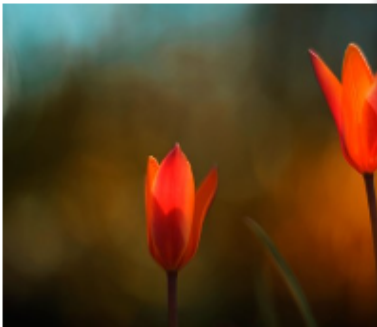

Image description
Such nice flowers

This is the dialog view. Here you can see the “Name”, “Physical name” and “Image description” can be edited. This is because these properties were selected for the dialog view in the datatype view. If you change the physical name, then the original image is renamed in the filesystem with the new name. Choosing physical names which match the images makes a website more SEO friendly.
